1. Product description

UPA 15-90, UPA 15-120 and UPA 120 circulator pumps are designed for pressure boosting of domestic water supplied from an external source in residential homes. UPA 15-90, UPA 15-120 and UPA 120 circulator pumps increase the pressure in order to make the required pressure available at showers, taps and other tapping points of domestic water.

UPA 15-90, UPA 15-120 and UPA 120 circulator pumps are used in open systems and can also be connected directly to the water main.

A flow switch starts or stops the pump when a tapping point is turned on or off. UPA 15-90 pumps have an integrated flow switch. UPA 15-120 pumps for China and Europe have an integrated flow switch. All other UPA 15-120 pumps and all UPA 120 pumps are supplied with an external flow switch, which has to be placed after the outlet of the pump.

All UPA circulator pumps are supplied with a cable and plug as required, and with fittings.

UPA 15-90, UPA 15-120 and UPA 120 circulator pumps offer a host of advantages:

- **Flexibility:** Suitable for installation in existing systems.
- **Comfort:** Low-noise operation.
- **User friendliness:** Plug and play.
- **Reliability:** Well known Grundfos quality.

Applications

UPA 15-90, UPA 15-120 and UPA 120 circulator pumps are designed for pressure boosting of domestic water supplied from an external source in residential homes.

UPA 15-90, UPA 15-120 and UPA 120 circulator pumps supply the required pressure for showers, taps and other tapping points for domestic water.

UPA pumps are used in open systems and can also be connected directly to the water main.

Type key

Performance range

Fig. 1 Performance range UPA 15-90, UPA 15-120, UPA 120 (230 V, 50 Hz)

TM06 2280 3914

2. Operating conditions

Start-up

The pump must not be started until the system has been filled with liquid and vented. Furthermore, the required minimum inlet pressure must be available at the pump inlet. The system cannot be vented through the pump.

The pump is self-venting and does not require venting before start-up.

Pumped liquids

UPA 15-90, UPA 15-120 and UPA 120 circulator pumps are suitable for the these liquids:

- Fresh water
- Potable water without chemical additives
- Chlorinated potable water.

UPA 15-90, UPA 15-120 and UPA 120 circulator pumps are not suitable for the transfer of flammable liquids such as diesel oil and petrol.

Temperature

Standard pumps	Max. [°C]	Min. [°C]
Liquid temperature	60/95/110	2
Ambient temperature	40	2

For liquid temperatures, please see also the [Data sheets](#) on page 10 and following.

Pressure

Operating pressure

Pump version	Maximum operating pressure	
	[MPa]	[bar]
UPA 15-90	0.6	6
UPA 15-90 Netherlands UPA 15-90 Global	1.0	10
UPA 15-120	1.0	10
UPA 120	0.6	6
UPA 120 Mexico	1.0	10

For operating pressures, please see also the [Data sheets](#) on page 10 and following.

Inlet pressure

To avoid cavitation noise and risk of damage to the pump bearings, a minimum pressure of 2.0 m head/0.2 bar is required at the pump suction port during operation.

3. Construction

UPA 15-90, UPA 15-120 and UPA 120 circulator pumps for pressure boosting are of the canned-rotor type, i.e. pump and motor form an integral unit without shaft seal. Only two gaskets are required for sealing. The bearings are lubricated by the pumped liquid.

UPA 15-90, UPA 15-120 and UPA 120 circulator pumps are supplied with cable and plug.

Characteristic materials:

- Shaft: aluminium oxide or ceramic
- Radial bearing: ceramic
- Thrust bearing: carbon
- Rotor can and bearing plate: stainless steel
- Impeller: corrosion-resistant material
- Pump housing: cast iron or stainless steel.

Motor UPA 15-90 (N)

The motor is a 2-pole, asynchronous, squirrel-cage motor. The motor has a built-in impedance protection and is short-circuit-proof. No external motor protection is required. The terminal box is easily accessible and has functional cable-connecting terminals. The cable entry is tight and incorporates cable relief.

Motor UPA 120 and UPA 15-120

The motor is a 2-pole, asynchronous, squirrel-cage motor. The motor incorporates thermal overload protection. Therefore, no external motor protection is required. The terminal box is easily accessible and has functional cable-connecting terminals. The cable entry is tight and incorporates cable relief including the plug.

Rotor can

The rotor can is closed with an air vent screw fitted directly at the top.

The upper radial bearing is incorporated in the top of the rotor can, and ground and honed with great precision.

Shaft with rotor

The rotor is secured to the shaft with a pipe and an elastic sleeve. The rotor is totally encapsulated in a stainless-steel cladding. To avoid precipitation of calcium in the radial bearings, the shaft has been plunge-ground at the bearing entries.

The shaft has a through-going hole to ensure perfect lubrication and cooling of the upper bearing. See sectional drawings.

To prevent system water under pressure from running out when the air vent screw is removed, a non-return valve (rubber ball) is incorporated at the impeller end of the shaft.

The air in the rotor chamber escapes out into the system through the hole in the shaft.

Thrust bearing

The thrust bearing is secured to the shaft by a spherically flexible suspension.

Bearing plate

The lower radial bearing is pressed into the bearing plate, and ground and honed with great precision.

Due to the relatively large surface of the bearing plate, the motor heat is carried away from the rotor can by the pumped liquid.

Impeller

The impeller is a radial impeller with curved composite blades. It is secured to the shaft by a split cone.

Pump housing

Standard (UPA 15-90, UPA 15-120)

The pump housing has a bore for a flow switch, and hydraulics have been adapted to the larger impeller. A stainless-steel ring equalises the dimensional difference between stator housing and pump housing.

TM06 1411 2314

Fig. 5 Pump housing UPA 15-90 and UPA 15-120

The standard pump housing is made of cataphoresis-coated cast iron. The pump housing has a pressed-in neck ring to guide the liquid directly to the impeller.

The pump housing and the stator housing are assembled with four cheese-head screws.

Stainless steel (UPA 15-90 N)

The cast stainless-steel pump housing has a pressed-in neck ring to guide the liquid directly to the impeller.

The pump housing and the stator housing are assembled with four cheese-head screws.

Standard (UPA 120)

The hydraulics have been adapted to the larger impeller. A stainless-steel ring equalises the dimensional difference between stator housing and pump housing.

The standard pump housing is made of electro-coated cast iron. The pump housing has a pressed-in neck ring to guide the liquid directly to the impeller.

The pump housing and the stator housing are assembled with four cheese-head screws.

TM02 1327 0901

Fig. 6 Pump housing UPA 120

Flow switch

UPA 15-90

The flow switch consists of an arm with a magnet (1), that moves in a chamber (2). The chamber is separated from the pumped liquid and the terminal box. The magnetic field activates a magnetic contact (3).

TM01 7 251 4199

Fig. 7 UPA 15-90 flow switch in "OFF" position

The pump selector can be set to the positions "OFF", "AUTO" and "MANUAL".

Selector in positions	Description
I OFF	The pump is switched off.
II AUTO	The pump starts and stops automatically (when the flow exceeds or falls below 90-120 l/h).
III MANUAL*	The pump runs continuously (even if tapping points are turned off).

* When the selector is in position "MANUAL", at least one tap must be open. Otherwise the pumped liquid may become too hot.

UPA 15-120

The flow switch consists of an arm with a magnet (1), that moves in a chamber (2). The chamber is separated from the pumped liquid and the terminal box. The magnetic field activates a magnetic contact (3).

TM06 5104 3315

Fig. 8 UPA 15-120 flow switch

The UPA 15-120 doesn't contain an On/Off switch.

4. Installation

The pump must always be installed with horizontal motor shaft. At start-up, the rotor can must be vented by removing the plug from the top of the motor.

Within a short time, the rotor forces the remaining air out into the system via the shaft.

UPA 120 and UPA 15-120 pumps can be installed vertically or horizontally. The mounting position is limited by the length of the cable between the external flow switch and the terminal box.

The terminal box of the UPA 15-90 has to be on the outlet of the pump, because of the built-in flow switch.

Note: As the pumps have drain holes, the terminal box must not face downwards.

Fig. 9 Installation directions

TM06 2251 3814

5. Performance curves

Curve conditions

The guidelines below apply to the performance curves on the following pages:

- Test liquid: airless water.
- The measurements for the UPA have been made at a water temperature of 20 °C.
- All curves show average values and should not be used as guarantee curves. If a specific minimum performance is required, individual measurements must be made.
- The curves apply to a kinematic viscosity of $\nu = 1 \text{ mm}^2/\text{s}$ (1 cSt).
- The conversion between head H [m] and pressure p [kPa] has been made for water with a density of $\rho = 1000 \text{ kg/m}^3$. For liquids with other densities, for example hot water, the discharge pressure is proportional to the density.

Fig. 10 Comparison of curves: UPA 15-90, UPA 15-120, UPA 120 (230 V, 50 Hz)

9. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

<http://product-selection.grundfos.com>

SIZING enables you to size a pump based on entered data and selection choices.

REPLACEMENT enables you to find a replacement product. Search results will include information on

- the lowest purchase price
- the lowest energy consumption
- the lowest total life cycle cost.

The screenshot shows the website's navigation bar with 'GRUNDFOS PRODUCT CENTER' and a search bar. Below the navigation bar are four main categories: 'SIZING' (Enter pump sizing), 'CATALOGUE' (Products and services), 'REPLACEMENT' (Replace an old pump with a new), and 'LIQUIDS' (Find pump by liquid). The 'QUICK SIZING' section is visible, featuring input fields for 'Flow (Q)*' (m³/h) and 'Head (H)*' (m), and radio buttons for 'Size by application', 'Size by pump design', and 'Size by pump family'. A 'START SIZING' button is also present. At the bottom of the quick sizing section, there are options for 'Advanced sizing by application' and 'Guided selection'.

CATALOGUE gives you access to the Grundfos product catalogue.

LIQUIDS enables you to find pumps designed for aggressive, flammable or other special liquids.

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc. in PDF format.

Subject to alterations.
